**6-pin type for switching  
low-level analog signal**

PhotoMOS®

**GU 1 Form A**  
(AQV21O, AQV214H)

**RoHS compliant**

## FEATURES

### 1. Controls low-level analog signals

PhotoMOS feature extremely low closed-circuit offset voltage to enable control of low-level analog signals without distortion.

### 2. Controls various types of loads such as relays, motors, lamps and solenoids

### 3. Optical coupling for extremely high isolation

Unlike mechanical relays, the PhotoMOS combines LED and optoelectronic device to transfer signals using light for extremely high isolation.

### 4. Eliminates the need for a counter electromotive force protection diode in the drive circuits on the input side

### 5. Stable on-resistance

### 6. Low-level off state leakage current of max. 1 µA

### 7. Reinforced insulation type of I/O voltage 5,000Vrms also available

## TYPICAL APPLICATIONS

- High-speed inspection machines
- Telephone equipment
- Data communication equipment
- Computers
