| IRM-V838M3-C/TR1 | 38 kHz |

Absolute Maximum Ratings (Ta=25°C) *1

| Parameter | Symbol | Rating | Unit |
|--------------------------|--------|-----------|------|
| Supply Voltage | Vcc | 6 | V |
| Operating Temperature | Topr | -20 ~ +80 | °C |
| Storage Temperature | Tstg | -40 ~ +85 | °C |
| Soldering Temperature *2 | Tsol | 260 | °C |

*1 Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability.

*2 Soldering time \leq 5 seconds

Test method

The specified electro-optical characteristics are valid under the following conditions.

1. Measurement environment

A place without extreme light reflections.

2. External light

The environment contains an ordinary, white fluorescent lamp without high frequency modulation. The color temperature is 2856K and the illumination at the IR receiver is less than 10 Lux ($E_v \leq 10\text{Lux}$).

3. Standard transmitter

The test transmitter is calibrated by using the circuit shown in figure 2. The radiation intensity of the transmitter is adjusted until $V_o=400\text{mVp-p}$. Both the test transmitter and the photo diode have the peak wavelength of 940nm. The photo diode for calibration is PD438B ($\lambda_p=940\text{nm}$, $V_r=5\text{V}$).

4. The measurement system is shown in Fig.-3
